**HYBRID
EVENT**

Professor Moro's research aims to investigate awareness of pathology and the potential for recovery in various different clinical conditions in an interdisciplinary perspective. The central topic of her neuropsychology research laboratory research (NPSY.Lab-VR) concerns body, space and action representations in healthy subjects and patients. She is a leading international expert in neuropsychological rehabilitation across a variety of neurological disorders and advanced clinical brain imaging methods. She is deeply involved in science communication to the wider public through engagement in schools, hospitals and international science platforms.

RSVP by no later than Monday, 18 July 2022
