January 31, 2022	4:00-6:00 pm	Language Development and the QUILS- QUick Interactive Language Screener
February 3, 2022	4:30-6:30 pm	Translational Science: bring developmental science out to people!

Roberta Michnick Golinkoff, Ph.D., is Unidel H. Rodney Sharp Professor of Education at the University of Delaware. She directs the Child's Play, Learning, and Development laboratory. Prof. Golinkoff is known for her research on language development, the benefits of playful learning, the effects of media on children, and early spatial development. She lectures all over world and is passionate about the dissemination of educational and developmental science. Her main goal is to bring attention to the importance of language development for children's academic, social, and occupational success. To identify children with language issues between 2 and 6 years of age, when remediation is most effective, she created the *QUILS: Quick Interactive Language Screener*. She has also devised the project "Playful Learning Landscapes" that brings physical installations to communities to support positive caregiver-child interactions and improve child well-being. Her work has garnered many prestigious awards. In addition to over 200 publications, she has authored 16 books and monographs. For further information, please, contact: elena.florit@univr.it
